ROBOTIC SYSTEMS FOR VERTICAL PRESSES

Improve productivity, increase shot-to-shot consistency and reduce labor costs

Increase your product yield by more than 50% with Sepro America's Robotic systems for vertical clamp insert-molding.

These modular work cells are designed to be easy to use, easy to service and easy to expand. We design and install these systems with your bottom line in mind.

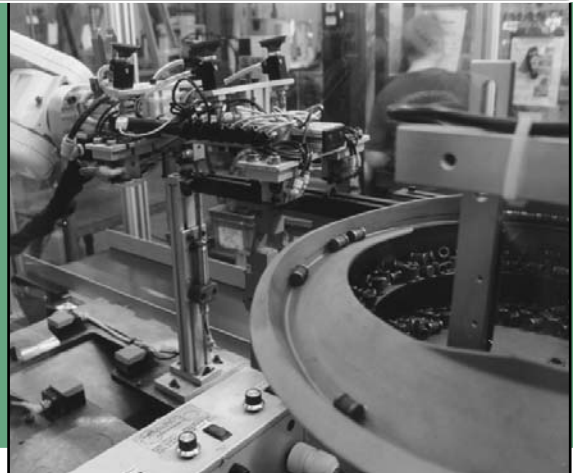

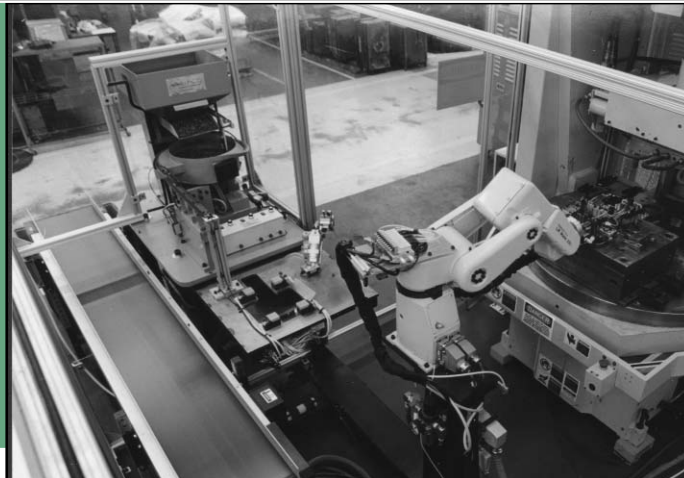

Just tell us about your insert-molding application and we'll help you determine what kind of system is best for your facility.

These and other components can be included in a vertical press insert-molding system from Sepro America:

- Six-axis robot
- Degating fixtures
- Cavity separation
- Feeder bowls
- Automatic insert
- Automatic visual inspection
- Guarding
- Conveyors
